

# Security Options for Education Facilities

Ensuring students receive an education and the necessary life skills to succeed is of the utmost importance. Security should not be a factor that gets in the way. In 2015 alone there were 23 shootings on college campuses. The urgency of placing high security measures continues to rise. Panel built manufactures security houses with non-ballistic options and all levels of UL and NIJ ballistic ratings. Incorporating a booth at the entrance and/or exit of a school enables the students to be able to focus on what really matters. As a custom manufacturer, Panel Built guard booths are not only secure but they are also designed to fit the exact look and function needed for your particular location.

*Pictured to the right is a custom booth Panel Built designed for Union County High School.*

*Anyone entering or exiting during school hours must stop and state their purpose when the light is red. This booth also included a climate controlled area for the guard on duty and surround windows so visibility remained clear from all sides.*
