

# Eaglesoft-Ready Digital Imaging Solutions

[DEXIS™ Titanium](#) and [KaVo IXS™](#) digital intraoral sensors now seamlessly integrate with Eaglesoft® Advanced Imaging. Without the need for a bridge or any additional software modules, capture high-quality diagnostic images directly within Eaglesoft.

## How does the integration work?

This integration is made possible by a free KaVo Imaging driver, called GxPicture.

1. Simply download the latest version of [GxPicture](#).
2. Connect your DEXIS Titanium or KaVo IXS sensor into your computer via USB. The calibration files are stored directly on the sensor and will be prompted to download.
3. KaVo Software Manager will automatically download and manage the installation process of your software updates.
4. Within Eaglesoft, select the sensor in the Preferences drop-down menu and then begin acquiring images.

It really is that easy. For more information, please watch this helpful [tutorial video](#).

All KaVo Imaging sensors are guaranteed for quality. Experience industry-leading image quality, durable engineering, and a no-questions-asked, unconditional replacement warranty.

To learn more or see a demonstration in your office, please contact your local KaVo Imaging Representative or call 888-ASK-KAVO.
