

Press Release

AG Neovo Launches the Advanced 4K PD-Series for Digital Signage and Control Rooms

“The advanced PD-Series stands out as a fine specimen in the 4K UHD league.”

- Jessica Shih, AG Neovo Project Manager Head

Earlier today, AG Neovo, a leading global provider of displays and signage for professional markets, announced the release of the much-awaited **PD-Series** 4K-resolution commercial displays that promise astonishing colour, startling brightness and flexible functionality in the current market.

“The advanced **PD-Series** stands out as a fine specimen in the 4K UHD league.” Said Jessica Shih, Project Manager Head at AG Neovo. “Featuring in 700 nits high brightness, they can be installed in broad digital signage applications and control rooms, and it promises a more satisfying visual experience for viewers with high visibility quality. More importantly, the built-in SDM slot is ready for smart integration and simple display management.”

Commercial Grade Panel for 24/7 Use

The **PD-Series** is a professional and reliable commercial-grade display that comes with 4K resolution and 700 nits brightness making it the perfect fit for control rooms, airport terminals, and shopping malls. But that's not all.

This commercial-grade display also boasts of being signage friendly. With the useful landscape or portrait mode present in all **PD-Series** models, advertisers can easily set up or move signage from one place to another. This feature provides great freedom and flexibility in customizing your display to meet your business needs.

Unlimited Control Wherever You Are

Addressing the demand for efficiency and excellence in the 4K display market, the **PD-Series** comes with more-value added features like the **PID Command & Control**, a display management software that is compatible with Google Play and Apple Store Apps. With this feature, users can remotely control the screens through the internet. These simple apps help users to monitor functions like temperature checks, colour calibration, key locking options, and usage monitoring.

Innovative Engineering Delivering Great Picture Quality

System Integrators in the EMEA market want excellent picture quality with stunning resolution and vibrant picture quality for the ages. However, most screens experience LCD Burn-in problem that causes ghost images or image sticking.

At the heart of the **PD-Series** are several advanced features like AG Neovo's patented **Anti-Burn-in™ Technology** which deals with the LCD monitor burn-in effect. With this Anti-Burn-in™ feature, the company promises to secure the user's investment by prolonging the life of all AG Neovo monitors and displays.

Extensive Functionality and Operability

What's more, the **PD-Series** also come with a built-in SDM slot designed for Intel smart display module that delivers powerful and smart signage. Combining this with the unique DisplayPort daisy chain functionality means you get to save significant amounts of time when configuring multiple displays.

But the versatility doesn't even stop there. The DisplayPort daisy chain functionality accommodates for video and audio to be transferred to multiple AG Neovo **large format displays**. The masterstroke then comes as the IR/RS232 loop-through feature that provides a convenient single point of control for multi-display installation. These two features make the **PD-Series** one of the easiest display screens to manage and configure multiple displays.

State-of-the-Art Signage for Smart Companies

The **PD-Series** lineup is available in a variety of sizes, specifications and models. All of which exceed the stringent requirements needed to display the official 4K UHD logo. Please review the specification table for more details about specific models. For more information, please visit: <https://displays.agneovo.com/gl/products/pd-series-advanced>
