Interactive Public Safety Response

Interactive Policing™
IMPROVING COMMUNITY ENGAGEMENT

Today's police force is empowered to enforce the law, limit civil disobedience and protect citizens and their personal property. Implementing these policing activities requires law enforcement officers and their command and control to maintain a constant awareness of their operating environment. In addition, there are manpower and asset resources needed to manage events as they occur within their public sector service area of responsibility.

The **Interactive Policing** platform by Equature® gives **real-time video and audio connectivity** to LE in the field by connecting mobile and vehicle audio and camera systems to an officer's command and control dispatch center to help them increase data collection, decision making and **improve community policing**.

Using our open platform architecture, command and control leadership can connect multiple devices simultaneously allowing configuration flexibility based on the organization's communication goals and emergency response requirements.

Through real-time data intelligence collection, officers and their command centers are able to increase officer safety and citizen satisfaction while improving department operational efficiencies.

Equature's **Interactive Policing** platform is designed for government municipalities seeking to accelerate police performance while keeping their command and control dispatch center actively involved with call activity in real time.

Equature is the largest, privately-held command and control dispatch recorder manufacturer in the United States and currently works with over 1,500 PSAPs. As specialists in interactive response, our **Interactive Policing** platform increases first responder safety and citizen satisfaction.

In a World Where Seconds Save Lives®, Equature Helps You In Real Time

Equature's **Interactive Policing** platform's operational uses include:

- Command and control helping first responders increase situational awareness
- Improved first responder and asset resource real-time deployment during emergencies
- Command and control leadership real-time incident monitoring
- Holding shift virtual roll calls
- Police paperwork capture and reduction through real-time communications back to command and control
- Real-time video evidence collection
- Real-time situational awareness collaboration between mobile officers and vehicle officers during a crime in progress
- Real-time video witness and victim testimony collection
- Crime scene integrity video capture prior to crime scene contamination
- On the scene shift supervisor situational awareness improvement as events develop
- Real-time first responder (Police/Fire/EMT) team mutual collaboration during emergencies
