

CORAS

Enterprise Decision Management Just Got Easier, Faster, & More Secure

Lethality Scoring | Cost-Per-Kill Projection | Simulation Analysis

Decision Support

Actionable Insights

**Interactive 'what-if' UI
& Snapshots**

**Auto-aggregation &
Business Rule Automations**

CORAS solutions are built on a trusted and proven Enterprise Decision Management Platform that has been providing federal and commercial clients with actionable insights and solutions for almost 20 years.

Powered by Artificial Intelligence (AI), and Natural Language Processing (NLP), the predictive engine empowers leaders to visualize previously unseen relationships in both structured and unstructured data thus not just providing data insights but enabling truly data-driven decisions in real time.

CORAS solutions produce analytics, with UI interactive knobs, and handles to discover what-ifs scenarios that visualize how today's changes affect budgets and planning in the future.

CORAS can be deployed in FedRAMP High Cloud, SIPR & NIPR, Commercial and Public Cloud, on premises.
