

## Semi-Automatic Bench Top

This semi-automatic bench top machine is designed to automate screw feeder systems. It holds the screwdriver and automatically lines up with the part, eliminating the need for an operator to hold the driver. The machine lines up the part so that it is presented directly below the driver. Simply press a switch and the driver screws in the part.

### Streamline your assembly process

- This machine speeds up production and minimizes operator involvement

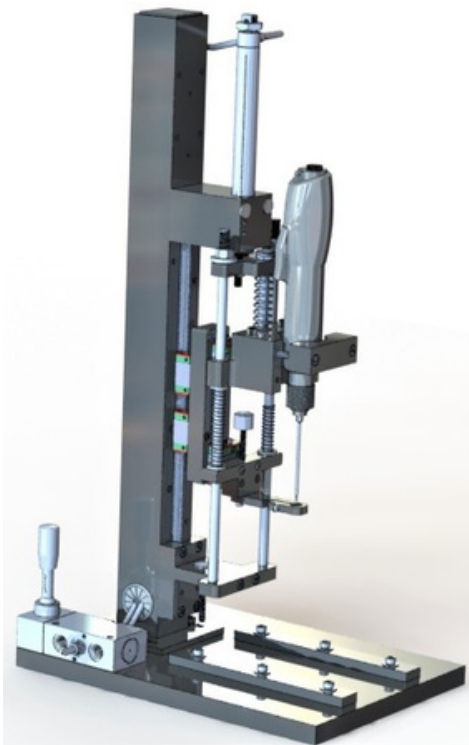

### Reduce Costs and Increase Profitability

- Automate the screw fastening process

### Universal Fit

- Works with all Sumake electrical screwdrivers
- Adjustable to any torque application
- Works best with a Sumake screw feeder system

## SPECIFICATIONS
