

SecureShield 365 Managed Detection and Response

Be Prepared for Any Office 365 Security Threats

Combating sophisticated cyber threats that evade built-in protection is a 24x7x365 job. Patriot Consulting brings deep expertise with Office 365 and marries it with leading-edge managed security services from Paladion, a global leader in MDR, to handle threat information specific to Office 365 and constantly evolving cyber threats.

Patriot Consulting Offers Continuous Managed Detection and Response for Office 365

Patriot's SecureShield 365 service provides continuous security monitoring for Office 365 applications and data in cloud and on-premise use. Patriot's engineers and platforms have been protecting Office 365 environments since Microsoft released this solution in 2011. Our cybersecurity team ensures rapid detection of attacks, and fast, effective response to minimize impact and restore normal operations.

With more than 1,000 specialized combined security professionals at the service of businesses and organizations worldwide, including security researchers, ethical hackers, threat hunters, malware engineers, data scientists, and more, you can be assured of robust security.

Flexible, Scalable, Evolving, Cost-Effective

With a modular architecture, Patriot's SecureShield 365 for Office 365 provides comprehensive coverage. We offer end-to-end security for greenfield situations, or subsets of modules to fit in with and protect existing security investments.

- **Full coverage of Office 365 applications:** From end-user applications like Microsoft Excel and Word to organization-wide applications like SharePoint and Exchange, our Office 365 covers all client internal systems and end-points. Patriot's security services also covers the use of Active Directory for Office 365 and more, with extension possible to other cloud and virtualized environments.

- **Detection of advanced attacks:** Using our high-performance, proprietary AI technology, our security team accelerates identification and detection of advanced attacks. These include unknown, stealth, and long dwell-time attacks. The platform helps pick out the telltale incidents, establishes links between seemingly isolated events, and assists the security team in speedily uncovering and prioritizing attacks.
- **Protection against morphing malware:** To protect organizations of all sizes, our services also recognize malware whose code has been changed to avoid detection. Conventional security systems can only match according to pre-defined rules and signatures. However, our AI platform uses machine learning technology to spot new and unknown threats.
- **Orchestrated threat response:** Patriot provides all the Office 365 threat response that is required, including containment, mitigation, and elimination guidance. Our team can assist with the response using efficient playbook solutions to define client activities and roles. Follow-up analysis and actions then limit or eliminate the risk of the threat recurring in the client's organization.
- **Comprehensive threat intelligence:** As prevention is still better than cure, our cybersecurity experts collect and analyze global Office 365 threat information to apply it to specific client installations, helping to anticipate and stop threats from starting. Protective actions are tailored to specific client environments, increasing their effectiveness and decreasing risk.
- **Seamless security collaboration:** We provide a complete Office 365 security solution to clients. We combine highly advanced security tools with a hi-touch approach to keep clients informed at every stage.

You can rely on Patriot Consulting to create or complete the security solution you need for Office 365 environments, as well as many other cloud such as Azure and on-premise environments. Our SecureShield 365 services and solutions are regularly updated to keep pace with or move ahead of cyber attackers. Our continual in-house training ensures that our cybersecurity analysts and experts are always ready to help you achieve optimal Office 365 cyber security.
