

CLOUD MANAGEMENT AS A SERVICE

SCALABLE AND RELIABLE CLOUD-BASED INFRASTRUCTURE

The Google Cloud Platform offers the versatility of no long-term contracts along with the scalability and reliability that you need. Using our expertise we will work with you to choose the best environment based on your current needs while always keeping growth on the mind. We pride ourselves on the optimization of the entire architecture because we only build scalable, secure, and reliable solutions for our clients when they put faith in us. We design and manage, you go grow your business.

Do you have the ability to internally manage your cloud and just need a reliable host for your data? Well, we have you covered! Quickly get your business up and running in the Google Cloud based on your specific requirements without the hassle of ground up architecture.

Let us guide you through this process and engineer the basics to set you off on your own!

THE FOLLOWING IS INCLUDED WITH OUR CLOUD MANAGEMENT SERVICE:

COST MANAGEMENT

We will always make sure any solution implemented is the most cost effective.

SECURITY

We integrate encrypted VPN tunnels straight to your office and offer VPN clients for traveling users. Servers are protected behind our firewalls which includes monthly penetration

DEDICATED SUPPORT

We are here 24/7 to support your environment. We take the technical lead, assisting you every step of the way from the Architecture, to DevOps, Systems and Network support.

24/7 MONITORING

Our main goal is to take the worry out of infrastructure and networking and let you focus on your primary business goals. Monitoring is a critical part of our managed services that allow us to know of any issue before you do.

SPECIALIZED PLATFORM MANAGEMENT

Our team of engineers can assist you with the most complicated areas, including Microstrategy Architecture solution, BI integration, data integration, and more, to help your business grow.

AUTOMATION & SCALABILITY

We can work directly with your business to automate complex server builds and maintain version control using container methodology. Only build what you need when you need it; this enables peak performance at all times.

CLOUD MANAGEMENT ONLINE TRAINING

As your organization grows, so does your need to getting new employees up to speed quickly to minimize downtime. This can be a challenge for companies with limited resources and employees working from multiple locations.

Cloud computing has made resources more accessible and easier than ever to use. With restrictions in network security on all fronts, accessing servers can be an issue, so we developed a customized solution that only requires internet access and a browser. Using cloud hosting offers the flexibility of scaling training servers as needed. We understand that cost is a determining factor, so we offer training environments for flexible time periods - as little as a day at a time, to any number of months at a time - with no contracts required. We also offer free testing to ensure you're able to connect to our training environment before purchasing any servers.
