Layer2
CLOUD CONNECTOR
for Office 365 and SharePoint

COMPATIBLE WITH
SharePoint 2016 • SharePoint Online • SharePoint 2013
SharePoint 2010 • SharePoint Foundation

SharePoint   **Office 365**

Features & Benefits

The Layer2 Cloud Connector closes gaps and solves issues that still exists with local file server migration, integration and backup in Microsoft Office 365, SharePoint & OneDrive using the Microsoft sync client:

- The connector offers a general approach for data migration, backup, integration and synchronization on-premises-to-cloud but also cloud-to-cloud that includes file server data like department shares and user home drives as just one option.

- Several data sources supported: Files on local discs, file server shares. OneDrive, Google Drive, DropBox, Box.Net and others via synced local copies.

- SharePoint to SharePoint connections supported.

- No limitations regarding number of files to sync: The SharePoint list view threshold issue (>5.000 / 20.000 files) does not apply to sync.

- Many known issues automatically solved: File name issues with special chars, path length limitations, forbidden file types auto-zipped and more.

- SQL-like query language supported on the file server side to sync specific pre-selected files only.

- SharePoint views supported to aggregate multiple file sources into the same SharePoint library.

- One-way sync (migration or backup) and two-way sync (permanent hybrid integration) supported.

- Flexible field/column mapping to add metadata.

- Can sync files – or just metadata and link back.

- Dynamic Columns to add business logic in C#.

- Several replication conflict strategies offered. Flexible logging and alerting. Central management.

- Secure connection: The connector runs as a Windows service on a server or client inside the corporate network with Internet connectivity, or in the cloud (VM). No data is exposed to any 3rd party. Connections via SSL/HTTPS.

- File synchronization is just one option: 100+ more data sources are supported for codeless sync.

> *"Brilliant tool, e.g. for replicating local files to a Sharepoint Online library. The assistance I received from Layer2 was outstanding. We are signing up as a partner and deploying to other clients using SharePoint Online."*
