

probiotic action
probiotics for healthy skin

Emerald, Topical Probiotic Sprayer and Hydrating Mist

Works to restore the skin's natural balance of probiotic bacteria. By restoring this natural balance the skin is better able to cope with the daily stress by creating a natural barrier against bad bacteria, pollutants, free radicals, and allergens. Probiotic Action encourages cell turnover so that your skin looks brighter, tighter and healthier. It is also a powerful antidote against wrinkles.

CLEAR YOUR SKIN WITH TOPICAL PROBIOTIC

Probiotic Action is the world's first beneficial topical bacteria spray – which helps you obtain a clear skin – without harsh chemicals, or ineffective gimmicks.

It's a product you spray on your skin AM, PM or at your convenience.

WHY TRY PROBIOTIC ACTION?

Probiotic Action is perfect for people that want a clear skin but have trouble getting there, including:

- Adults who are experiencing skin issues often overlook the root causing the problem, which is usually an imbalance on their skin's natural bacteria
- Teenagers, hormones play a significant role in outbreaks among teenagers and prepubescent children
- Blackheads, acne begins with the development of hardened sebum that plugs up the opening of the follicular pores on the skin.
- Millions of people who have used antibiotics in failed attempts, know that killing the bacteria doesn't work for everyone

**Enjoy a clear skin with
sprayable topical
probiotic**

HOW PROBIOTIC ACTION WORKS?

Probiotic Action is created from spores which, when mixed with water, are activated to create a solution that delivers the probiotic to the proper location. These spores then attach to the skin. Even though Probiotic Action does not kill the P. acne bacteria, the beneficial healthy bacteria eats the excess skin and toxins that the P. acnes need in order to thrive (“starving” the P. acnes), and gets rid of the dead bacteria, too! When your skin’s bacteria are in balance, you are more likely to be protected from bad bacteria, free radicals, and pollutants. Acne occurs when the skin is out of balance with more bad bacteria than probiotic bacteria therefore, reducing the P. acnes population is important step for clear skin.

PROBIOTIC ACTION HAS JUST 2 INGREDIENTS

- Purified water
- *Bacillus Ferment* spore forming bacteria

IT IS FAST, EASY AND GENTLE

Using Probiotic Action is as easy as it is effective. Just spray it 2 to 3 times a day on the affected area, and let it dry.

- It is a natural product.
- Does not contain harsh chemicals.
- Environmentally friendly.
- Water-based.
- Can be used long-term.
- Reduces the number of bacterial pathogens (agents that produces disease).
- Does not create pathogens that will develop resistance to treatment later on.
- Cleans your skin at a microscopic level.

WHY PROBIOTIC NOW?

- A probiotic therapy consists of "good" bacteria that are part of the healthy skin microbiota. They are topically applied to the skin and should out-compete the "bad" bacterial population as seen on affected skin. This probiotic has no risks or side effects.
