

LEAVE THE CAR AT HOME

## It's all about happy and healthy employees

When was the last time your employees looked forward to their commute? Join the thousands of companies across the country who support the healthful and environmentally responsible benefits of using an eBike to get to work.

eBikes are not like ordinary bicycles. eBikes contain motors and lithium ion batteries to add power to your pedal stroke. While they look and work just like a bicycle, certain models can reach speeds up to 28mph with just a few pedal strokes and travel up to 90 miles on a single charge. Hills just seem to disappear. Advancements in technology deliver hydraulic disc brakes, GSM connectivity, GPS, USB, powerful lights, and even a mobile phone app to control and fine tune your performance.\*

Just give us a call or send us an email ([info@velocitycommuting.com](mailto:info@velocitycommuting.com)) and we'll bring demo bikes right to your company campus so your employees can take a short demo ride and understand the experience. We're happy to send you a short presentation that explains everything. There is no financial obligation or commitment.

We make it easy to educate all of your employees on the benefits of eBike commuting. Plus, eBikes make a terrific performance reward or customer gift.
