uniprint ∞

UniPrint InfinityCloud for Secure Chromebook Printing

Adapt To The Next Normal

With the retirement of Google's Cloud Print service coming to an end in December 2020, users will still need to find an alternate way to easily print from the web using Google Chrome or Android devices. Cloud printing has always been a convenient service, as it works both on desktop and mobile and provides extended utility to older printers.

UniPrint InfinityCloud is a cloud printing service that offers a secure cloud printer management platform which adds value through migrating print servers and print management to the cloud.

The cloud print management platform removes the need for costly print servers and allows administrators simplified central management of direct IP printing, while significantly improving end users overall printing experience.

Key Benefits

Universal home and office printing experience

Security and compliance

Remote administration of printers, drivers, and users

Fast deployment of print drivers to printers
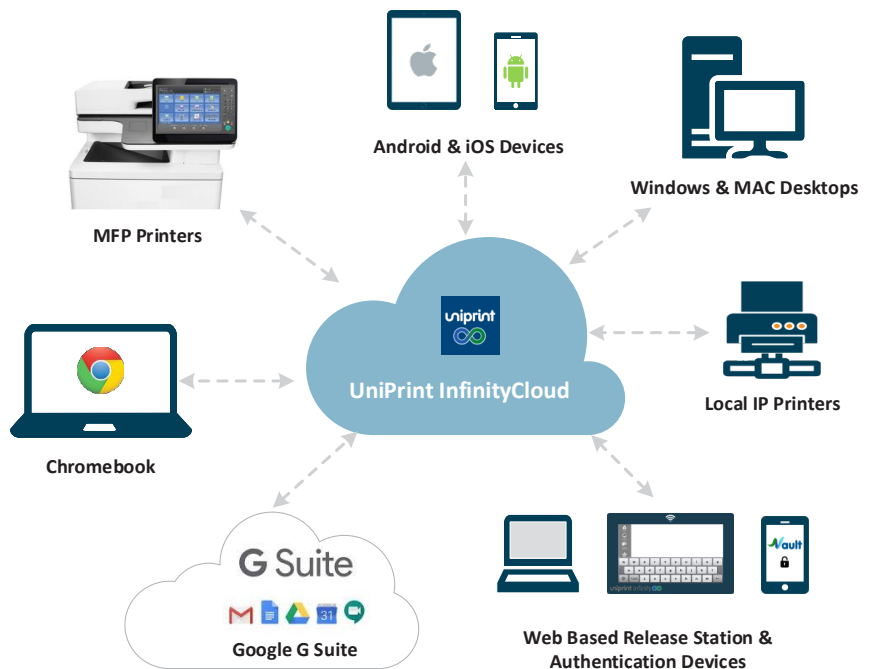

Reduced print-related IT support costs

Removal of costly physical print servers

Process Fusion

How It Works

All printers and their printer data are migrated from your print servers to the Cloud. After a user downloads and installs the UniPrint Cloud agent onto their workstations, it will automatically retrieve all the appropriate printer drivers for their IP printers from the InfinityCloud platform. The user then simply needs to select PRINT and the print job will be sent directly to the IP printer.

Print jobs can also be sent to the Cloud to be released on demand through any mobile device or secure release station.

MFP Printers

Android & iOS Devices

Windows & MAC Desktops

Chromebook

UniPrint InfinityCloud

Local IP Printers

Google G Suite

Web Based Release Station & Authentication Devices

Key Highlights

G-Suite & Azure AD Authentication	Chromebook & Mobile Printing	Secure Contact-less Office Printing	Convenient Home Printing	Statistics & Archiving
Simplified user management and easy end-user login	Print directly from any Chromebook or mobile device, including Android and iOS.	Securely release print jobs from any mobile at any office location without touching the multi-function printer	Conveniently release print jobs with direct IP printing to your home printer regardless of printer vendor	Track what is being printed by users regardless of whether they are working from the office or at home

Other Features

- ✓ Web-Based Management Console
- ✓ Self-Service Portal
- ✓ Role Based Access Control
- ✓ Print Queue and Server Migration
- ✓ Global Print Driver Storage & Deployment
- ✓ Xerox and HP MFP Apps

> Within a short time we have noticed a drastic reduction in the number of tickets to our help desk in relation to printer management.
