

Domino to Sharepoint Migration

Domigrator is built in and runs on a Domino server and from a Notes Client.

Prerequisites:

IBM Notes Client version 8 and above running on Windows. Disk space on the Client enough to store the exported projects.

IBM Domino server version 7 and above on any operating system.

Domigrator can move data to Sharepoint 2013 or 2016 as well as Sharepoint online.

Licensed per Domino database.

DOMIGRATOR®

Domigrator® migrates data from IBM Domino to Sharepoint

A lot of companies has moved their e-mail from IBM Notes/Domino to Microsoft Exchange or O365. But what about all applications built in Domino? Often left behind and lacks support and attention.

It used to be complicated and expensive to move applications to Microsoft Sharepoint

That has just changed completely with Domigrator®

Domigrator® moves the data from ANY IBM Domino application - no matter if it is customized, standard or completely tailored. Domigrator® moves to Custom Lists, Document Libraries or Discussion Boards. Very easy and efficient.
