

WE ARE XERRIS

AND WE CRAFT SOLUTIONS THAT ALLOW OUR CLIENTS TO **THINK BIGGER**

Xerris is an **AWS Advanced Partner** and technology leader specializing in digital transformation through **microservice development, frontend development, cloud migration, and DevOps**.

Our team of 30+ technology problem solvers is located across North America, and each member is an established expert with years (and in some instances decades) of experience in their respective fields.

We've delivered AWS focused solutions for **agricultural, banking, energy, and e-commerce** companies throughout the world.

OUR PASSION FOR QUALITY AND DELIVERY

At Xerris, quality isn't a guideline, **it is religion**. From start to finish, Xerris focuses on **code excellence** and developing quality system architecture that will simplify your digital transformation journey and set you up for success. We adhere to a **test-driven development** approach with every project and routinely receive exemplary grades on AWS Well-Architected reviews.

Microservice Development

We specialize in developing AWS solutions based on cloud-native, serverless, or containerized microservices. These smaller, interconnected services are ideal for automating services, decomposition of monolithic legacy systems, and facilitating cloud migration. The benefits of using a microservices architecture include a more cost-effective, scalable, agile operation, and much quicker deployment time.

Cloud Migration

We help companies create and execute cloud migration strategies that allow them to re-platform legacy technologies resulting in higher uptime, minimized operational costs, and to unblock innovation through the adoption of a cloud-first approach to digital transformation. We can set up your AWS environment in AWS Control Tower to make your cloud-services setup secure by default. Xerris also offers support with training and workshops to facilitate the shift to a digital-first workflow.

Frontend Development

We have worked with everyone from startups to Fortune 500 companies to develop beautiful and highly innovative user experiences. Our expertise in modern front-end frameworks such as React, Angular, and Vue, combined with our deep focus on microservice development, allows us to develop projects in a highly agile fashion allowing for rapid project iterations and continuous delivery.

DevOps

If your organization is concerned about data breaches, system downtime, or clunky software delivery cycles, that's where DevOps—also known as Site Reliability Engineering—comes in. Our team of experts can ensure your AWS infrastructure is configured and installed to maximize reliability, security, and facilitate the continuous delivery of rapid product iterations.
