**The AIR4 Audiophile grade Apple AirPlay and Google Cast speaker by Eton*****In sound we trust – experience sound as pure as the moment it was recorded***

Eton Corporation ([www.etoncorp.com](http://www.etoncorp.com)), a leading creator of high performance audio products, is pleased to announce the immediate availability of the Eton AIR4 premium multi-room WiFi streaming speaker. With Italian design and German engineering the Eton AIR4 combines professional audio quality with the latest in WiFi technology to deliver an unparalleled multi-room audio experience. From age-old cherished albums to the latest releases on Spotify, effortlessly stream audio content via Apple AirPlay® or Google Chromecast. *“In a time of leapfrogging races to the bottom for both price and quality the Eton AIR4 speaker brings together a style and audio finesse that is sorely missing in the market.”* Says Skip Orvis, Eton’s Chief Technology Officer *“The AIR4 by Eton, more than an audiophile quality speaker, is a work of art we are sure our customers will be delighted to feature as a primary piece of their home’s décor.”*

***Tradition equals expertise***

In Europe Eton has been synonymous with bringing listeners pure music enjoyment from high-performance speaker and sound systems since 1983. As a preeminent leader in audio, Eton is internationally renowned for their design skills and a remarkable capacity for innovation in Hi-Fi audio. The AIR4 wireless streaming speaker is yet another innovative addition to Eton's high-caliber product range – and a real asset to the world of smart wireless home Hi-Fi technology.

***Sound and design***

The product of over 30 years' experience in loudspeaker driver engineering, the Eton AIR4 offers

precise and intense sound playback from a dual-concentric speaker design at a high output of 80 watts. This guarantees clean and powerful bass and throaty mid tones using a premium-quality carbon diaphragm, while soft dome tweeters deliver velvety smooth treble notes. Every attention to detail has been taken in the matte finish metal mesh grille, which is surrounded by a high-polish chrome surround. The sensory pleasure provided by the strong yet smooth feel of the multifunctional control dial on the front of the speaker engages the sense of touch like nothing else on the market. Three color combinations are offered to ensure that the AIR4 becomes an artistic audio centerpiece in any decor, from the bold Mint/Red to the clean White/Silver or the distinguished Black/Silver option. The rear panel of the speaker continues to demonstrate the engineering excellence of the design, the compliment of audio interfaces is seemingly endless with a LAN Ethernet port, a USB port, a 3.5 mm AUX-in stereo jack for playback of fine analog playback devices (such as a phonograph) and a 3.5 mm stereo output for connecting a pair of headphones.

### ***Smart multi-room solution***

The fully custom Etón smartphone app holds the key to enjoying music without limits. Easy to set up and available for both Android and iOS devices, the app makes it possible to utilize the full spectrum of the AIR4's functions by providing the perfect link between almost any smartphone or tablet and the speaker. Seamless audio is immediately available via Apple AirPlay and successful pairing of all components is guaranteed by the Google Home Assistant, which the app is just as happy to communicate with as it is to work with Google Chromecast services such as Spotify, Deezer and Tune-In. The app's clever multi-room function organizes music playback among multiple speakers – playing different songs in different rooms – conveniently from any smartphone.

### ***Endless audio capabilities***

The Etón AIR4 delivers perfect sound from any data format. Multifunctional and multitalented, the AIR4 can be controlled intuitively via the dial on the front, using the included remote control or directly from a smartphone, tablet or computer. It can receive Bluetooth 4.1 and 2.4 GHz or 5 GHz Wi-Fi at a streaming rate of 192 KHz/24 bit. It can even handle lossless audio formats and is able to recognize WMV9, AVS, VP6, FLAC DSD, APE and WAVE. The high-performance digital sound processor tunes the music continuously, dissolving the auditory boundaries between digital and analog music.

The AIR4 multifunctional speaker by Etón is available to purchase from the first of April with an MSRP of \$599.99 from retailers and online at [www.etoncorp.com](http://www.etoncorp.com).

### ***About Etón Corporation***

For over three decades, Etón has developed award-winning products that empower our customers in their world. Our roots started with producing German-engineered audio and video products. In the 1990s, we began a special partnership with the American Red Cross, which continues to this day— including an exclusive agreement to design and develop products to help prepare communities. We continue to innovate and iterate to help people be prepared for unexpected emergencies.
