***Alchemy Global Networks releases a new White Paper on
the Future of Zero Trust Security and solving issues in compliance programs and initiatives.***

Nicholasville, KY | January 17, 2023 - Alchemy Global Networks, a leader in cybersecurity solutions, announced today the release of its new white paper, "Zero Trust and Beyond". The paper provides insights and recommendations for organizations looking to improve their cybersecurity posture and achieve compliance in IT operations.

Compliance in IT operations is becoming increasingly important as the number of threats and attack surfaces grows, and the pressure for secure operations increases. Organizations often fail to improve security when implementing new solutions or replacing existing ones and compliance is challenging to achieve because it must be balanced with the need for organizations to keep up with technological trends and maintain competitiveness.

Programs such as Smart Cities, Continuous Diagnostics and Monitoring (CDM), Comply to Connect (C2C), Cybersecurity Maturity Model Certification (CMMC), Federal Risk and Authorization Management Program (FedRAMP), and Zero Trust Architecture (ZTA) are useful solutions, each of which emphasizes securing interactions between people, systems, and applications. However, there are difficulties in implementing and managing these solutions due to data inaccuracies, excess data, and cumbersome data analysis processes.

To improve incident responses and monitor transactions effectively, organizations need a clear and consistent model for solving key challenges. These challenges include asset visibility and automation, event stream processing and management, and asset relationships management relationship management.

"The ever-evolving cyber threats and compliance requirements make it imperative for organizations to take a proactive approach to cybersecurity," said Donnie Moss, CEO of Alchemy Global Networks. "Our White Paper, "Zero Trust and Beyond", provides a clear and actionable model for organizations to achieve compliance and improve their cybersecurity posture, while keeping pace with technology trends and maintaining competitiveness."

The paper is available for download at www.agn.tech or can be requested by emailing communications@agn.tech.

Alchemy Global Networks

Alchemy Global Networks LLC provides cybersecurity and network solutions to clients to meet the challenges of the ever-changing cyber threatscape. Alchemy Global Networks has a team of consultants and engineers with decades of professional experience designing and delivering asset intelligent solutions for service consolidation efforts. Alchemy Global Networks consistently finds the best solutions for organizations, who appreciate our experience, passion, and commitment to understand their real-time needs and goals. As a trusted provider with Federal, Civilian, Defense, Intelligence Agencies, and Commercial clients, Alchemy Global Networks supports over 5.1 million endpoints.
