*WHAT IS
CBD
& IS IT GOOD
FOR YOUR
HEALTH?*

CBD WILL NOT GET YOU “HIGH.” CBD DOES NOT CONTAIN THC, THE PSYCHOACTIVE COMPOUND FOUND IN CANNABIS.

What is CBD?

CBD is short for cannabidiol, and it is one of more than 60 compounds found in Hemp and Cannabis plants. CBD does not contain THC, the compound that creates the “stoned” feeling.

How does CBD affect the body?

CBD works by acting on the body’s endocannabinoid system creating physical changes in the body, which can be beneficial in many ways. CBD is one type of phytocannabinoid. Phytocannabinoids mimic endo-cannabinoids, so they can act like a supplement, giving you a boost beyond what your body can produce.

What does CBD treat?

Research has shown several CBD oil benefits, ranging from alleviating social anxiety to improving rheumatoid arthritis. CBD can reduce inflammation and decrease chronic pain. CBD can be a natural addition to help balance your health and wellness program.
