Mr. John Smith  
Advanced Paving Technologies, Inc.

Dear Mr. Smith,

This letter is to express my support for the proposed research project titled “Asphalt Rehabilitation Utilizing a 3-D Shaped Asphalt Layer” to be performed by the Pavement Research Center at UC Davis. The variable screed of the 3-D Asphalt Paving Machine is a very innovative concept that shows great potential in achieving a higher level of density and smoothness on our pavements. In turn, this would result in longer lasting quality pavements and lower transportation costs.

I wish you great success in this endeavor and kindly request you keep us posted on your progress.

Best Regards,

Dan Rozycki, President  
The Transtec Group, Inc.
