

MeasureColor Mobile

MeasureColor Mobile is a color measurement solution consisting of a small device to capture surface color data and an app to view, share and manage workflow.

- Cloud-based, this B2B solution revolutionizes the color measurement process by enabling businesses to accurately scan surface colors, leverage mobility and deploy in hours at a fraction of traditional costs.
- Brand owners, suppliers and clients can select color preferences, measurement standards and communicate immediately across the globe.
- Equipped with full spectrum white LEDs and an accurate Tristimulus XYZ sensor, MeasureColor Mobile's short term repeatability is less than .01 ΔE.

- Textiles
- Paint
- Plastic
- Packaging
- Furniture
- Print
- Clothing
- Interior
- Exterior

Color Approval Process

The 80's called and they want their fan decks back!

Your clients>Scan any surface color, instantly find a match to your color library and place an order.

Your employees>Scan any surface color, search your color library, view the best options and recommend the perfect match.

Quality Control

We make delta-E, delta easy.™

Create an inspection workflow based on your standards, images and measurement protocols.

Results are displayed in an easy to understand format, then stored for sharing or archival...your choice.

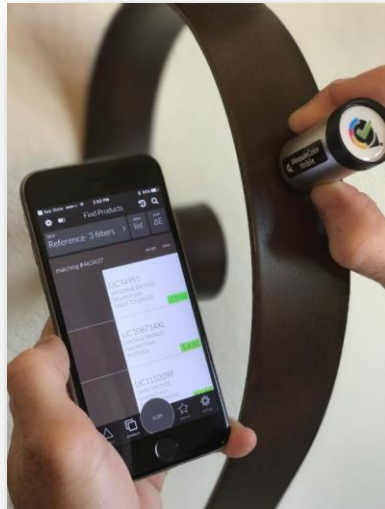

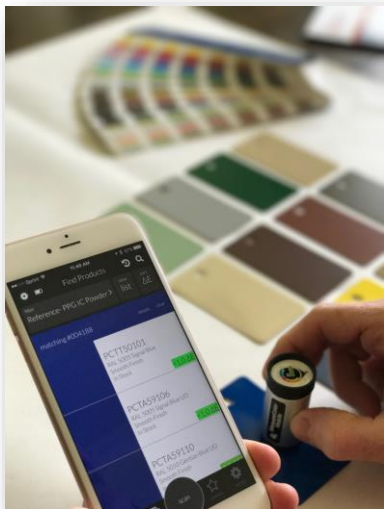

Color & Appearance

How do you *really* know it's correct?

Customize the app with your color targets, scan the item and you'll know immediately if it's ready for display (or printing or packaging).

- Pass/Fail
- CIE Lab, sRGB, Hex and LCH
- d50 + d65
- Export results
