The KOSMOS Pen Hits the Marketplace Running With a New Titanium Version

With a remarkable dedication to aesthetic, functionality, and design, stilform announces the launch of the KOSMOS Pen in a refined version made of Titanium.

Munich, Germany - August 11, 2017 - The KOSMOS pen takes it up a notch to greet the world with a new version. With the ante upped on insightful design, the KOSMOS version 2.0 makes it's debut to a ready marketplace in Titanium.

Created as the ultimate design pen, the writing utensil is a homage to intuitive functionality. How so? It houses a futuristic mechanism that employs magnetic forces to hold the cap once open. And open it certainly does. With the ease of form, the Titanium pen can be opened with one hand and immediately used without added effort. Based on a universal pattern called the Golden Ratio, the ergonomic pen is noted for its balance and strength. This is due to applying the historic pattern to every component.

Christoph Bohrer, co-founder of stilform GmbH said of the Titanium pen, "Just like our original award winning design, the KOSMOS Titan has a mechanism that uses magnets to reveal the tip. This motion is highly intuitive and provides visual feedback. When you can see the gap, the pen tip is retracted. Likewise, when there is no gap, you can pick up the pen and instantly start writing."
