

People. Technology. Results.

Results and relationships are important. At Resource Data, we believe that combining an outstanding team with the right technology produces the best outcomes—and our clients feel the same way. That's why they turn to us for their IT needs, confident in our ability to maintain strong connections while delivering the value they have come to expect from us.

Industry Experience

At Resource Data, we take the time to study and understand the forces affecting your industry. But we never just produce a one-size-fits-all solution. Instead, we listen to you—learning the specific systems, operations, and regulations impacting your business. Then we join you in tackling the technical, legal, and operational challenges of pursuing new opportunities.

What Our Clients Say

"With Resource Data's help, we achieved all our goals in an efficient and cost-effective way. Doing this work completely in-house would not only have taken much longer, but would have also pulled us away from other vital business activities."

Bobby Saleh,
GIS Manager
Guidon Energy

"We have relied on Resource Data's professionals for over 20 years to complete the most difficult IT projects we have. More than a consultancy, they act as our partner and ensure our success in projects."

Troy Swanson, CIO
Anchorage Water and
Wastewater Utility

"I unreservedly recommend Resource Data as a highly competent software development company, exemplifying a culture of integrity, professionalism and reliability."

Patrick Brosnan,
Former Head of IT
Alaska Department of
Motor Vehicles
