

## THE IMPECCABLE EXPERTS®

### HOW TO STOP VIRUSES?

Viruses are molecules of protein that, upon entering the body, change the genetic code of cells, turning them into destructive and fast-multiplying cells.

They are covered by a thin external layer of fat.

The suds in soap break down this fat when you scrub hands long enough to make enough of them (about 20 seconds minimum).

Likewise, ethyl alcohol in concentrations over 60% can also quickly dissolve this fat.

In other words, they can quickly dissolve the outer layer of a range of different viruses and therefore destroy them.

HCG HAND SANITIZER, ELIMINATES 99.9% OF GERMS. KILLS NOROVIRUS, E. COLI, SALMONELLA AND COLD & FLU IN 30 SECONDS, AND HEPATITIS A IN 60 SECONDS.
