Automation Accelirator Program
RPA90X

ACCELIRATE is very excited to announce it's 90 day Automation Accelerator Program **RPA90X!** Do you need to get your Automation Initiatives in shape? Are you struggling to identify the right processes to show immediate return of manhours back to the business? RPA90X was built for just these reasons.

ACCELIRATE was born from the Enterprise Consulting world and understands the challenges Fortune 1000 companies face in their Automation journeys, starting with Platform **Installation**, setting up Infrastructure with IT, to building your Automation Process Pipeline, and ultimately Development and Testing.

When you are first embarking on your Automation journey, there will be a lot of questions, and a lot of uncertainty. Finding the right information to select the best platform and the right resources to perform a proper pilot program can be overwhelming.

The **RPA90X** was designed to get in and get real results through our **E^3** strategy:

E ^ 3

EDUCATE

- Educate - RPA Capabilities and Limitations
- Identify Possible Implementation Areas and Low Hanging Fruit
- Select Process for Discovery Session
- Define Digital Transformation

1 - 2 Weeks

EVALUATE

- Obtain Details for Selected Process
- Platform Installation
- Verify Technical Approach and Assumptions
- Document Current Cost and Performance Measurement Criteria

1 - 2 Weeks

EXECUTE

- Automate POC Process Present Performance
- Improvement Metrics
- Plan Broader Implementation
- On Going Support and Maintenance

8 - 10 Weeks

Too often too much time is spent on the Educate and Evaluate portion, because large consulting companies know this is a ripe ground to try to get into other areas of your business. The end result is months spent evaluating things for a Proof of Concept, and then you are left with only a few processes in place without a real ROI to show the business. **ACCELIRATE** knows that with the right delivery Pod we can deliver real results fast.

RPA90X DELIVERY POD

PROCESS ANALYST

- ✔ Process Definition
