

kofoni

Our Locker

Our dockless locker enables customers to deploy single units or create centralized locker systems. Customize sizes are available for order, minimum quantities do apply.

programmable

sharing - delivery - storage

Solar

wall outlet or solar panel options are available for each locker.

Smart

Bluetooth and cellular options are available for our lockers.

Stackable

A modular locker, that is easy to stack. Creating flexibility to fit the spaces you are using.

Programmable

* Patent Pending

sharing

The clear door enables users to identify a product to rent. Users can now access a basketball at a local public park or a drill in the lobby of their apartment complex.

delivery

Programmable to quickly become a hub for parcel or food delivery. Users can pick up their items in the lobby of your building, and the weatherproof design also enables curb side delivery.

storage

Quickly store your brief case or backpack. Create a great amenity for employees at a corporate campus or visitors of a mall or airport.

Shareables

Providing quick and affordable access to products increases traffic of public spaces and provides a valuable amenity to your customers.

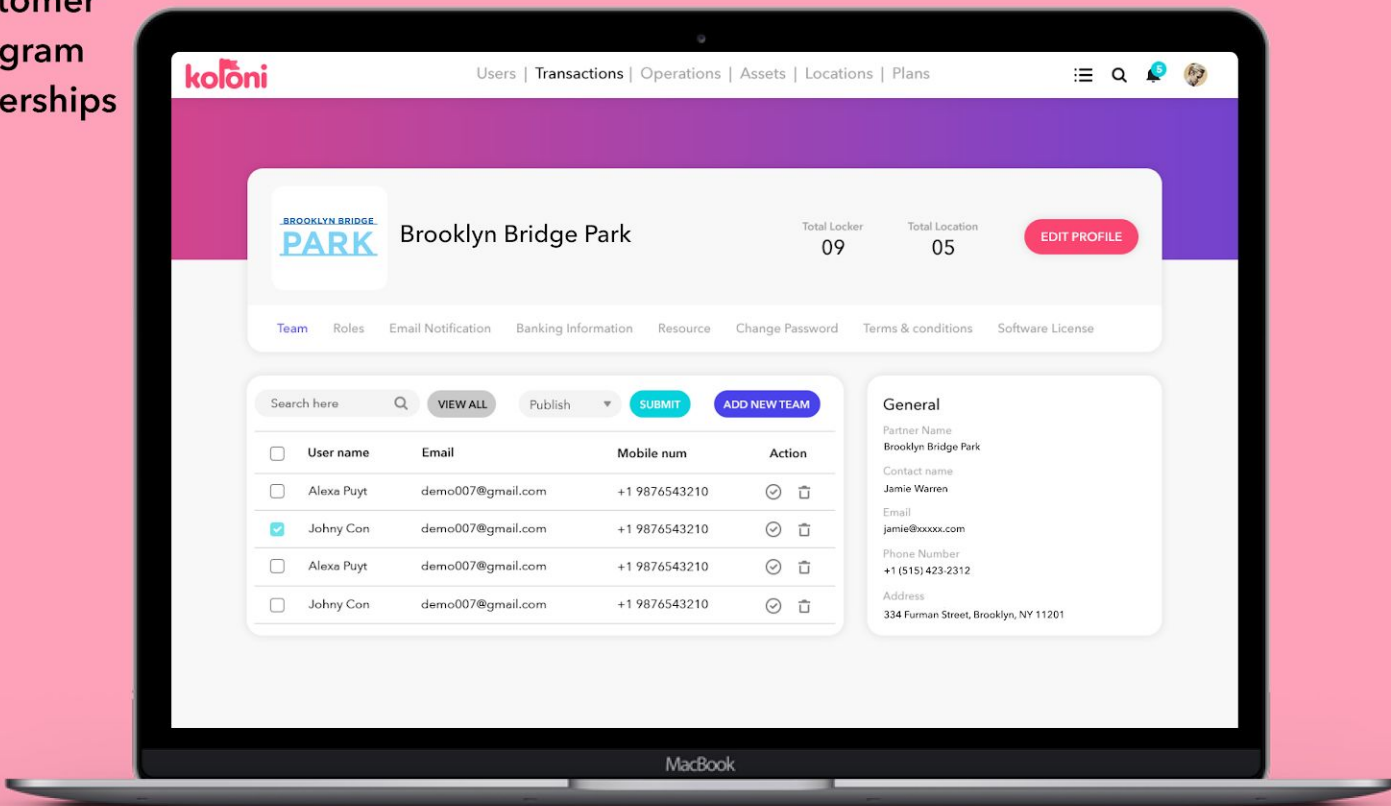

The clear door provides an inviting approach to the user. They are able to see what is available to rent. Access the product by scanning the code. When they return, they lock the door and take a photo of the product inside the locker.

how it works

create

Once the lockers are ordered, the customer can create an account where they program their locker, create pricing and memberships

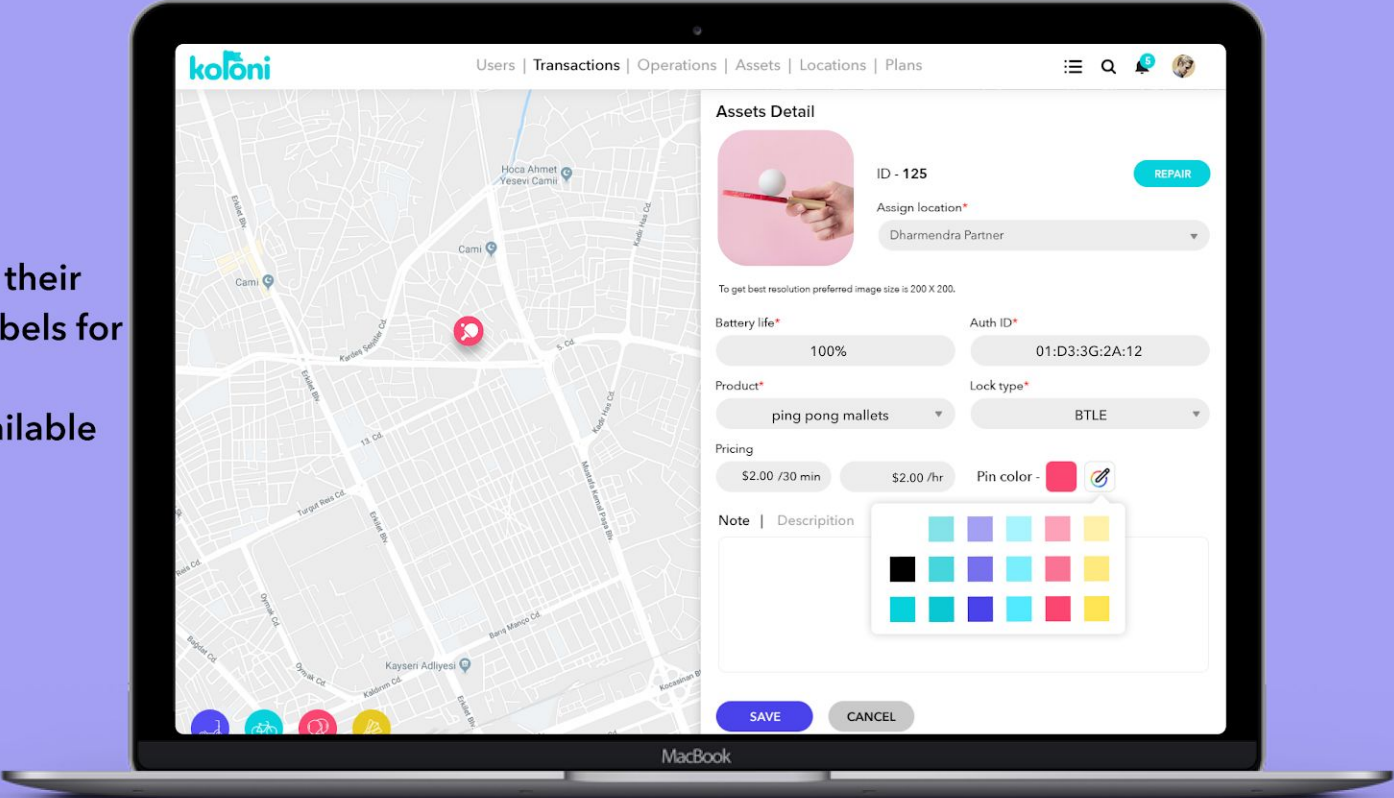

how it works

deploy

The customer creates locations where their lockers will be installed and creates labels for products available for rent, as well as defining whether the products are available for public or private access.

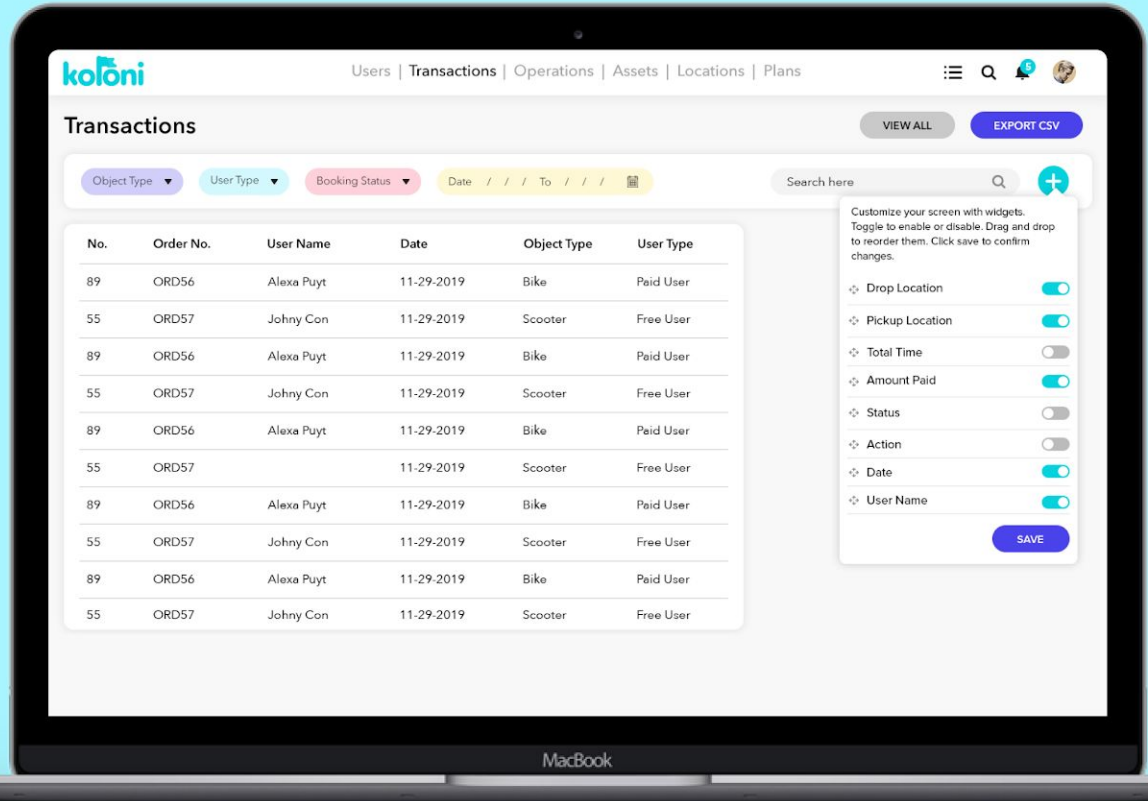

how it works

manage

Once deployed, the customer can manage transactions and engage with their users using our dashboard to track analytics and visits to each location.

User App

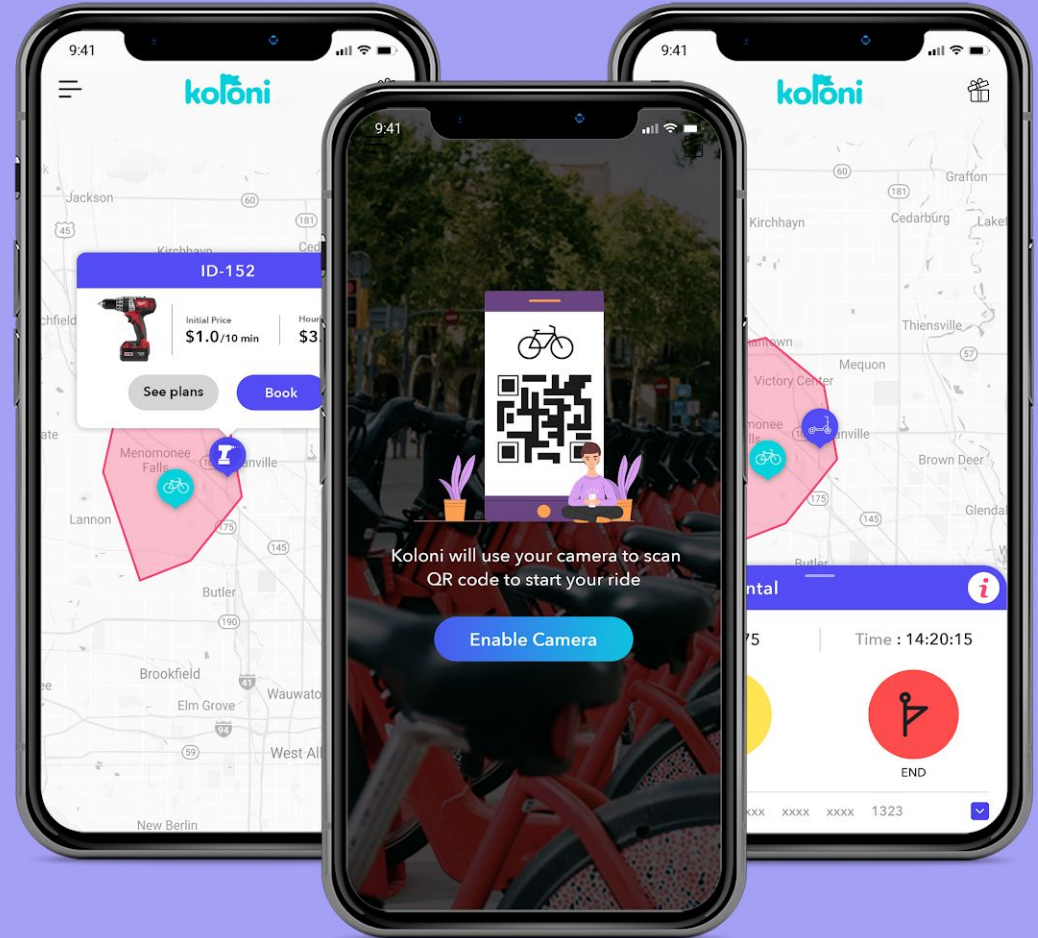

The koloni app enables the user to rent a product from a locker, pick up a parcel delivery, or store their belongings. The user simply scans a QR code or enters the locker ID number to gain access.

1. Find a locker on the map
2. Scan a QR code to open
3. Return, lock door, take photo

FAQ

What material(s) are used in building the locker?

The locker is constructed out of 1/8 aluminum and a polycarbonate door.

What is the weight of the locker?

The 12"x12"x12" locker weighs 12.5lbs.

Is it easy for vandals to break into?

The thick, aluminum body and polycarbonate door makes it difficult for a vandal to break in.

How do I mount or install the locker?

You can either secure it directly to an interior or exterior wall OR we have pole mounts.

Can I change a locker from sharing to delivery?

Absolutely! Changing a locker from sharing to storage is a simple click of the button.

Can I connect this locker into an existing application?

We offer enterprise solutions that enable partners to connect their application to our lockers via an API an simple integration.
