

REMOTERELIEF INTRODUCES FAST FILES SERVICE FOR TRANSFERRING MASSIVE FILES QUICKLY.

HIGH POINT, NC | MAY 31, 2016

Today, RemoteRelief, Inc., a company specializing in Managed Mobility and Data Movement for businesses, adds a new service to their lineup called 'Fast Files'.

As technology continues to advance, file sizes are growing and companies are left needing a way to transfer these massive media files. The new Fast Files service will allow companies to share and send large gigabyte or massive terabyte files quickly, reliably, and securely, from anywhere, to anyone. A brandable portal will also be included to help highlight your business.

RemoteRelief's FastFiles service is an Intelligent File Transfer Service built on the same powerful, patented technology platform that companies like Disney, ESPN, Fox and many others rely on to securely move their files. This technology has been helping the world's largest media and entertainment companies move petabytes of data for the last decade and includes acceleration, security, scalability, elasticity, and resource management.

RemoteRelief President, Jeff Pack, stated, "With the introduction of FastFiles, RemoteRelief brings advanced file transfer technology to its customers facilitating secure sharing and distribution of large files that is substantially faster than traditional methods."

ABOUT REMOTERELIEF, INC.: RemoteRelief, Inc. is based in High Point, NC. Partnering with employees who have over 50 years of experience in technological services, RemoteRelief provides Managed Mobility, Data Movement, and Large File Transfer services to businesses.
