

IDENTITY & ACCESS MANAGEMENT FOR FLEXIBLE WORKFORCES

BlueFletch Enterprise **Worker ID** helps companies manage identities and secure access to workforce devices in a shared environment. Harness the power of advanced features to streamline access, enhance security, and optimize productivity for a flexible workforce in the warehousing, retail, manufacturing, and logistics industries.

Key Features

User Lifecycle Management

Streamline the onboarding and offboarding process for your flexible workforce with centralized user management. Save time and resources while ensuring that access to vital resources is granted or revoked efficiently.

Role-Based Access Control

Take control of user permissions by assigning specific roles and access levels to employees and contractors. Simplify user management and ensure that sensitive information remains secure and accessible only to authorized individuals.

Single Sign-On (SSO)

Simplify the login process for your employees and contractors with a single set of credentials for multiple applications. Reduce password fatigue, improve efficiency, and lower the risk of compromised passwords.

Benefits

Improved Security

Remove badge/account sharing and prevent unauthorized access and reduce the risk of data breaches

Enhanced Productivity

Accelerate access to necessary resources and streamline workflows for employees and contractors.

Device Accountability

Minimize lost devices and administrative workload by knowing who had which device and when/where its was used
