CompanyTRAK™
Powered by V2SOFT

**Get your employees back to the office in a safe environment.**

With our patent pending, dual verification technology, CompanyTRAK uses real contact tracing to follow and log interaction of employees using a combination of mobile location services (GPS) and BLE technologies along with BT Beacons and scanners for places where cell phones can't be used.

Our solution tracks both primary and secondary exposure and notifies employees and HR when another employee that they have been in contact with self-reports with symptoms or with positive test results.

Our algorithm manages and traces a real interaction to mark and notify employees when exposed.

Understand when your employees have had an exposure and when there has been interaction with exposed or COVID-19 symptomatic/positive employees

Date and time stamp of each interaction within the 6-foot radius is tracked and stored.

Select group of exposed employees can be quarantined instead of the whole office

Geofencing available option for office buildings and manufacturing plants

App Customization available

- Ability to self-report symptomatic or positive testing for employees
- Option to enable mandatory sending of symptomatic or positive testing notification to HR or site admin
- Date and time stamp of symptomatic or positive notification for reporting and exposed employees
